

PFAS Health Study: November to December 2020 CRP Progress Report

Study update

Component 2 and 3 – Blood Serum Study and Cross-sectional Study

- Fieldwork in the comparison communities ceased on 18 December 2020.
- Analysis of stored blood samples for additional health biomarkers in the exposed study participants is in progress. Participants who did not complete the survey in 2019 are being recontacted to obtain consent to test their stored blood sample for health biomarkers.
- Analyses are underway for the exposed blood serum study and cross-sectional survey.

Component 4 – Data Linkage Study

- Analyses are underway for perinatal outcomes using linked data from New South Wales, Queensland, and the Northern Territory.
- Data analysis plans for the national data linkage of cancer and mortality outcomes and childhood developmental outcomes are being finalised.
